

Scrum Meeting 10/25

The following was the first scrum meeting of this sprint and while we still followed a general scrum format the meeting was much more of a planning the project meeting. The meeting included creating the backlog to the best of our knowledge and setting up the basis of the first sprint. After that we assigned basic tasks to each member of the team and from there moved into a traditional scrum. The scrum overall was successful in planning our framework and methods of organization which we will utilize throughout the project. The methods we plan to use to stay organized through this agile project include: Jira for sprint and backlog management, google drive for documentation, and github for code management. After figuring out these details we went into our normal scrum meeting format.

Where: over a discord call

When: 9:10am on 10/25

Nathan:

What have you done?

- Nothing has been assigned yet

What will you do?

- Collaborate with Ethan on project manager roles.
